What makes a house more expensive?

The most expensive houses are high quality, large, new, and in the best neighbourhoods.

$163k	3.3x	3.6x	1.8x
typical sale price	excellent vs average quality	best vs cheapest neighbourhood	built after 2000 vs before 1950

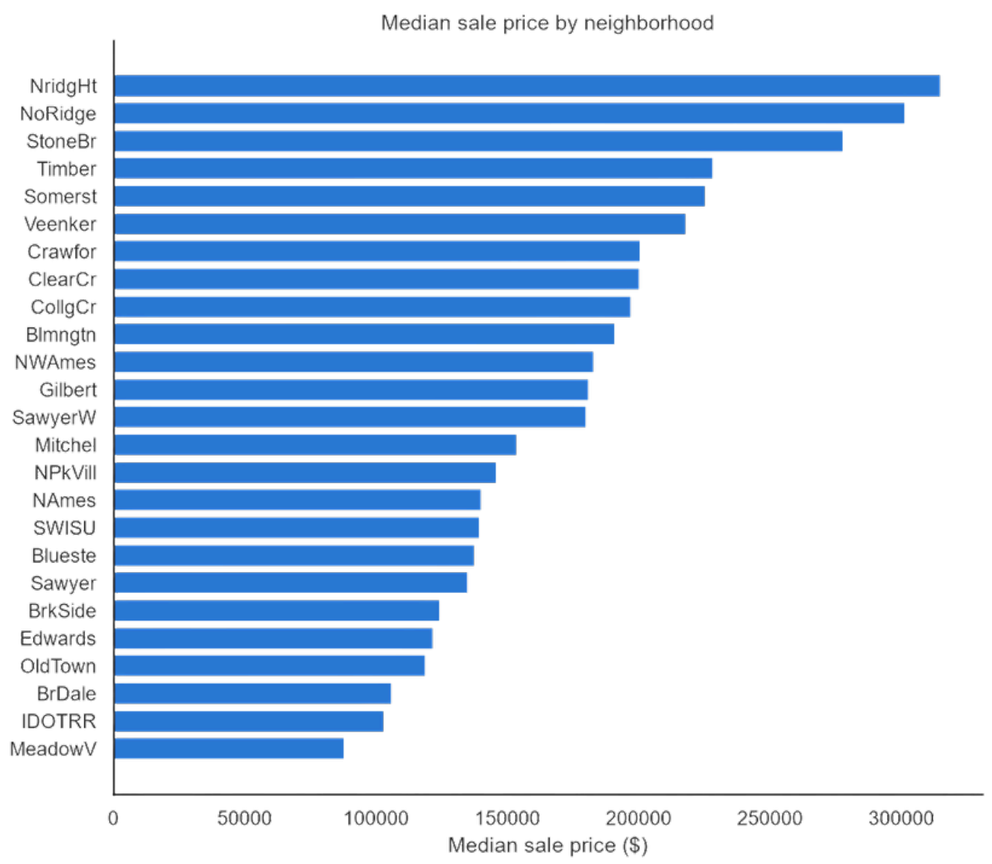

Prices: a typical house sells for $163k; most sell for $130k-$214k, and a few luxury homes reach $755k.

Quality matter most (correlation 0.79): every quality level adds value.

Size comes second (correlation 0.71): bigger houses sell for more.

Location matters: NridgHt ($315k) costs about 3.6x MeadowV ($88k)

Conclusion

A house's price depends mostly on **how well it is built** and **how big it is**; **where** and **when** it was built come next.

1. **Quality:** An excellent house sells for 3.3x an average one.
2. **Size:** more living space, higher price.
3. **Location:** The best neighbourhood costs 3.6x the cheapest.
4. **Age:** Newer houses sell for about 1.8x older ones.
